

About NetCologne IT Services

NetCologne IT Services offers business customers innovative ICT technologies and advanced solutions for their digitization. The service portfolio of NetCologne IT Services (ITS) includes managed services, cloud solutions such as Microsoft 365, IT security concepts, services hosted in the own data center as well as IT outsourcing options.

The Education Services are committed to the digitization of schools in and around Cologne. In addition to fast internet, this includes cloud services, rollout and management of mobile devices, support and the operation of the digital infrastructure. As a 100% subsidiary of NetCologne, NetCologne IT Services with its around 140 experts in Cologne and external locations takes care of its customers' IT infrastructure – from planning to operations.

Education Services

As part of our regional commitment, we support schools with professional and individual IT services. These services include amongst others IT infrastructure, cloud services, support, administration and training.

The heart of our services is a central identity management system that makes everyday digital school life easier, optimized and future-proof. It not only facilitates the management of login data, but also the individual integration of tools and services. Furthermore, it simplifies processes and creates secure access to everything that is used in today's and tomorrow's everyday school life.

Clients are installed and maintained in the school with packaged software via the central device management. Therefore, it is secured that all tools work together smoothly. NetCologne ITS packages the software and distributes it from the data center directly to the mobile devices in the schools.

Our target group

The services of NetCologne IT Services are designed for school authorities who want to support their schools with the operation of IT infrastructure. Especially, when logins to different cloud services are required and professional standards are to be introduced in school IT.
